

## Be Future Ready! Hurricane Preparedness

### Tips to reduce the impact of a hurricane on your operations:

- ☐ Pay close attention to forecasts in order to know when to take action.
- ☐ Confirm that your employee contact lists are up to date.
- ☐ Secure all doors and board up windows to protect against flying debris.
- ☐ Clean out floor drains and catch basins and check sump pumps.
- ☐ Anchor and fill above-ground tanks with water or product to keep them in place during the storm.
- ☐ Fill the fuel tanks on your emergency generator and fire pumps. Fill your vehicles' fuel tanks, as well.
- ☐ Check to see that your fire protection equipment is working.
- ☐ Make sure your important records are protected – or duplicate them and move them offsite to a safe area.
- ☐ Shut off process piping carrying gas or flammable liquids in case a pipe breaks in the storm.
- ☐ Shut down production processes safely and turn off the electricity for non-critical equipment.
- ☐ Tie down sheds, small outbuildings or similar structures that may not be designed for high winds.
- ☐ Move any items inside that could blow away in a powerful windstorm. Items including yard storage, benches, chairs, plant urns, signs or potted flowers could become flying debris and cause substantial damage during a storm.
- ☐ If possible, move key operations, such as shipping and receiving or customer services, to another location. Identify people who can help you before and after a hurricane.
- ☐ For building damage, portable generators, temporary heating or other restoration/mitigation support contact Signal Restoration.
